

Google Calendar™ Integration

for Smart Service®

Google Calendar Integration

for Smart Service

Access Smart Service anywhere.

Does your mobile device run Google? Of course it does! Every tablet, Android phone, and iOS device in the world has an abundance of Google applications available for it. If your device can run any of these, it can run Google Calendar. And if you can run Google Calendar, you can parse your Smart Service jobs through your phone, tablet, or laptop.

With Google Calendar integration, you can go mobile right now, with your existing communications technology. You're already using *something* to communicate with dispatched workers, and chances are that device gets along just fine with Google.

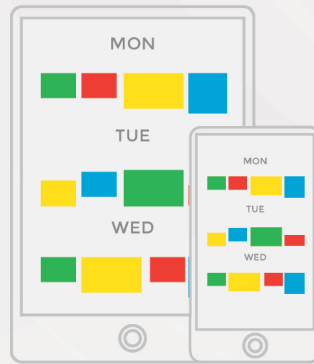

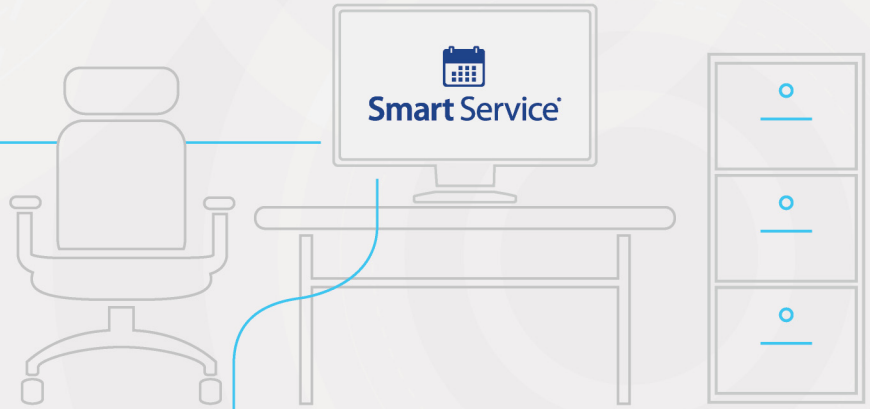

Eliminate wasteful practices.

How many times a day do your dispatchers answer basic questions from field technicians? "What do I do next?" and "Where do you want me to go?" are probably common refrains. Well, no longer! Smart Service will automatically update Google Calendar when new jobs are assigned. The answers technicians need will be right there, in the palm of their hands!

Google Calendar Integration gives you a robust, real-time scheduling board you can push to any internet-enabled device. Throw it onto a giant screen for the benefit of your whole office, push it to a technician's tiny, pocket-sized phone, or do anything in between. Wherever Google goes, your Smart Service jobs will travel with it.

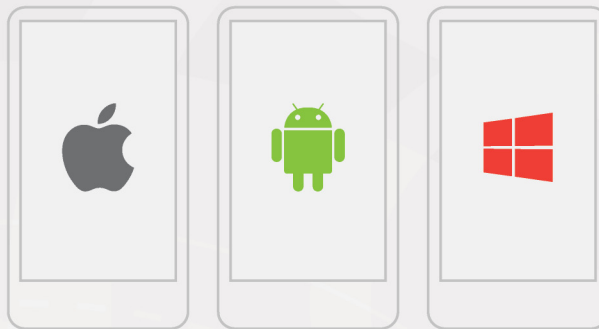

Set your **Smart Service** schedule from the office.

Smart Service will create Google Calendar events.

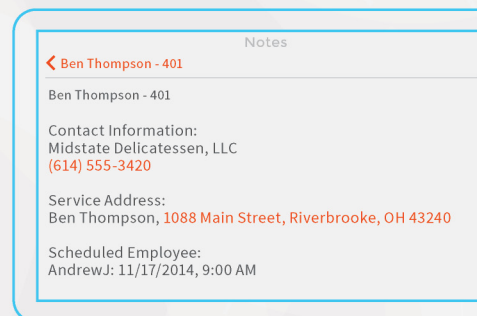

Use your **Calendar** as a real-time, electronic scheduling board. Display it on a giant office TV or send it to your employees' mobile devices.

Updates to your **Calendar** will be sent to the field in real time.

Your **Calendar** can be viewed on almost any internet-enabled mobile device.

Tap on an individual job to view its details. Review customer information and job notes at your convenience.
