Resolved Issues

1. Smart Routes now processes up to 100 unique addresses at a time. (Issue #4623)

2. Added the ability to use an apostrophe in user login ID's. (Issue #4452)

3. Resolved an issue where the item class field would restrict movement if accidentally entered. (Issue #4522)

4. Job exceptions can now be activated and inactivated without issue. (Issue #4540)

5. Inventory module will not close after creating a purchase order. (Issue #4549)

6. Fixed an issue where employees deleted from Smart Service™ were able to be selected from employee drop down menus. (Issue #4558)

7. The Service Agreement Module now calculates the correct sales tax when a discount item is added. (Issue #4559)

8. Improved functionality of purchase orders when attempting to close a purchase order that has not been saved to QuickBooks®. (Issue #4566)

9. Added the ability to view more than one day at a time in the Owner's Management Dashboard. (Issue #4570)

10. Improved prospect and prospect job workflow when converting a customer. (Issue #4542)

11. Purchase orders created by iFleet enter QuickBooks® upon syncing, thus resolving issues with marking received items from the field. (Issue #4588)

12. Corrected the calculations for gross profit and gross profit percentage inside of The Service Agreement Module. (Issue #4590)

13. Resolved an issue with PO Sync resulting in error 2475. (Issue #4620)

14. Improved the loading speed of job items tab. (Issue #4629)

15. Work orders, estimates, and summary sheets populate active items and information when other items are inactive. (Issue #2135)

16. Improved maximum height for the Waiting List. (Issue #2650)

17. Resolved an issue that would intermittently prevent Smart Routes from finalizing route changes. (Issue #4644)

18. Resolved an issue causing Smart Service to fail to recognize a valid line item in QuickBooks when the item name contained more than one consecutive single quote character. (Issue #4592)
