

Enhancements

1. Added an option to correspond with the new HPP (hosted payment page) for CardPointe users. Please see Smart Service release notes for more information. (Enhancement #7066)

Resolved Issues

1. Corrected an issue where equipment names were truncated in the list. (Issue #6913)
2. Fixed an issue with the date picker in equipment records. (Issue #6914)
3. Resolved an issue where customer notifications for travel would not send. (Issue #6951)
4. Corrected an issue with the auto-capitalization tool not functioning in notes. (Issue #7003)
5. Fixed an issue where management notifications via Twilio would not send. (Issue #7059)
6. Refined sync process to provide a faster user experience. (Issue #7060)
7. Increased the visible limit of line items to 10,000. More items can be stored in iFleet, but require the user to use the keyword search rather than scrolling through the list. (Issue #7061)
8. Created a reminder to update the payment amount collected if the user does not take a full payment for the service in question. This reminder is displayed when revisiting the payment record in iFleet and in Smart Service. (Issue #7063)
9. Resolved an issue for users taking payments on estimates before version 105. (Issue #7141)
