

## Enhancement Requests

1. When using the email template functionality for work orders, using the “Job Name” field will now only pull the job name, rather than the customer and job name. (Issue #7482)

## Resolved Issues

1. Resolved an issue with custom email templates when the setting is being used but the template is empty that resulted in customers receiving emails with “NULL” values. (Issue #7460)
2. Resolved an issue where iFleet would incorrectly calculate taxes when using group items. (Issue #7466)
3. Resolved an issue where billing address information from the job record was not populating during check payment processing (Issue #7478)
4. Resolved an issue where formatting a “Prospect Job Item” user defined field would result in iFleet crashing when viewing the item details. (Issue #7488)
