

Enhancements

1. Use custom work order when finalizing jobs. iFleet will now allow you to designate one or more of your forms available in iFleet as custom work orders. In doing so, iFleet will display the custom work order when finalizing a job, skip the unnecessary signature and terms screens, and automatically attach the custom work order to the job for you. The option to use custom work orders can be set in the Smart Service setup tab and selecting which attachments are custom work orders are set in iFleet settings. (Enhancement #5312)
2. Edit the email address in iFleet. A new permission has been added to allow iFleet users to edit the email address assigned to the job. This change will be transferred back to Smart Service and update the job accordingly. This permission is set per user. (Enhancement #5272)
3. Add to customer notes from iFleet. If given the appropriate permission in Smart Service, iFleet users will have the ability to add to the customer notes field from iFleet devices. This permission is set per user. (Enhancement #5278)
4. Search for vendors when creating a purchase order. iFleet purchase orders now have a search bar on the vendor list to help you find the desired vendor faster. (Enhancement #5302)

Resolved Issues

1. A new Dropbox API has been released. Mobile users who currently use Dropbox will be required to authorize iFleet to use Dropbox again on each device. (Issue #5246)
2. Resolved an issue where the “Add Equipment” list would revert to the top of the list when choosing options. (Issue #4965)
3. Resolved an issue where photos taken for the customer notification would load with the wrong orientation. (Issue #4279)
4. Fixed an issue where form fields would not properly load into customer notifications. (Issue #5175)
5. Corrected an issue where inactive checklists would cause an app crash if selected. (Issue #5322)
6. Resolved an issue where the device would allow the creation of a blank purchase order. (Issue #5339)
