

## Enhancements

1. Added new form fields to pull timestamp times without date information. (Enhancement #s 10038 & 10105)
2. Added support for work order vs. invoice template options added in Smart Service version 122. (Enhancement #10044)

## Resolved Issues

1. Fixed an issue for QuickBooks Advanced Inventory users where Site would not be filled in for items that are part of a group item. (Issue #10042)
2. Made a change to make sure iFleet is connected to a Smart Service database before sending survey results. (Issue #10067)
3. Corrected an issue that would occur when trying to load a file containing a certain unicode character (202F, narrow non-breaking space). (Issue #10069)
4. Resolved an issue for QuickBooks Advanced Inventory users where replacing a non-group item with a group item would not update the Bin and Site for sub-items within the group. (Issue #10079)
5. Corrected an issue where replacing a non-group item with a group item when the item quantity is zero would result in a queue error. (Issue #10080)
6. Fixed an issue that would allow users to use the time clock function in the middle of an iFleet sync. (Issue #10101)
